**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1-13 are allowed.
2. The following is an examiner's statement of reasons for allowance: After reviewing the remarks made by the applicant in the pre-appeal brief filed 03/14/2008. Examiner finds the remarks to persuasive. The most pertinent prior art is Dinello et al (US 7,309,611) teaches A test strip and method for detecting an analyte present in a sample. The test strip comprising: a buffer addition zone to which a buffer may be added; an absorbent zone proximal to the buffer addition zone; one or more test zones distal to the buffer addition zone, at least one of the test zones including a first analyte binding agent immobilized therein which is capable of binding to the analyte to be detected; a terminal buffer flow zone distal to the one or more test zones, the absorbent zone being positioned relative to the buffer addition zone and having an absorption capacity relative to the other zones of the test strip such that when a volume of buffer within a predetermined buffer volume range for the test strip is added to the buffer addition zone, a distal diffusion front of the buffer diffuses from the buffer addition zone to a distal diffusion point within the terminal buffer flow zone and then diffuses proximal relative to the one or more test zones; and a sample addition zone distal to the terminal buffer flow zone to which a sample may be added. Anderson et al ( US 6,936,476) teaches assay device in FIG. 2A fully inserted with the stepper motor shown positioned relative to the fully inserted assay device, with a reader head shown positioned in a lowered position over a test opening of the assay device, and with a carriage wheel shown engaged by the assay device so as to lower the reader head into its lowered position therein; and FIG. 14 is a side view of the reader head assembly of FIG. 10, having been

actuated so as to pivot the reader head assembly into a raised position suitable for insertion and removal of the assay device into and from the reader head assembly within the assay reader. None teaches a processing device connected to the optical sensor for using the *change of direction* data to determine the position of the test strip with respect to test strip reader and for determine optical absorption of the information on the test strip and diagnostic significance of the information of the test strip, thus improving the accuracy of the test strip result. The Examiner finds no reason or motivation to combine the above references in an obviousness rejection thus placing the application in condition for allowance

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to NANCY BITAR whose telephone number is (571)270-1041. The examiner can normally be reached on Mon-Fri (7:30a.m. to 5:00pm).
